3Dee®
Active Office Chair

Not simply **ergonomic.** But threefold **dynamic.**

The **3Dee** active office chair is the first of its kind and the result of absolute consistency in engineering just as in design. Its 3D motion – horizontal and vertical – is designed without compromise around the natural biomechanical model of the human being. It fulfils the vision of sustained change to our everyday office life. And the stunning attractive design will please particularly all those for whom the office is more than just a workplace but also a living space.

The **Revolution** of Ergonomics.

Normal office chairs cannot do much against the daily lack of motion in the office. On the contrary: They contribute to bad sitting postures. We call this the “sitting trap” – because sedentary activities frequently lead to physical discomfort and severe health problems.

The remedy is more motion in the office. With its unique concept of 3D ergonomics the **3Dee** supports and encourages the intuitive movements of the human being. The principle is as simple as it is ingenious: The chair follows the movement of the body and not vice versa. The result: Natural sitting, controlled movement up and down combined with posture-optimizing motion – sideways, backwards and forwards.

**Sitting on a conventional
office chair**

**Sitting on the 3Dee Active
Office Chair**

The most innovative office chair in the world.

Activating: Because the **3Dee** follows your movements when sitting, so your back stays straight. Frequent change of posture strengthens your back and keeps your muscles fit.

Motivating: The patented 3D Technology **①**, comprising the unique 3D motion joint in the base and the spring strut, supports and encourages harmonious 3D movement. This activates your circulation and enhances performance.

Relaxing: The backrest with patented lamellar technology **②** and physiologically shaped cushioning **③** provides support without restricting freedom of movement. The lumbar support **④** and counter-pressure can be adjusted individually.

No restrictions: The intelligent seat is slightly convex, upholstered with breathable multi-zone integral foam **⑤** and equipped with the flexzone[®] technology **⑥**. For a healthy seat climate and optimum sitting comfort without pressure points.

Moving. In every detail.

Tested and approved
by the Healthy Back
Movement and the Federal
Association of German
Back Schools (BdR).

Time for a **change.**

If you don't want to make compromises and are looking for an office chair that activates and also catches the eye, then your only option is the **3Dee** Active Office Chair. It is moving, relaxing and high-tech design to the very last detail. This is unique and introduces a new form of dynamics and quality of life into the office. You can't expect more of an office chair. But it doesn't have to be less in the future either. Go for three dimensions. And no compromises.

Individually adjustable:

Backrest tension and seat height, sideways and vertical movement

If you observe children, you will see that there is hardly a time when they are still. Movement is in the very nature of the human being. It is the long periods of sitting and standing – in school, at work and in the car – that puts the body into a straightjacket of motionlessness, which we pay for at a very high price: our health.

Therefore, since 1997, **aeris** has devoted itself to revolutionising standing and sitting at the workplace. Our philosophy is as simple as it is effective: more motion, in three dimensions. We call that 3D ergonomics. For our customers this means better health, more motivation and higher productivity. And success proves us right. Be it the **swopper**, **muvman**, **3Dee** or **oyo** – our products set new benchmarks and have catapulted **aeris** into the top 100 of the most innovative small and medium-sized German businesses.

Together we can get things **moving!**

Just get in touch with us.
