Ergonomic vertical wireless mouse

Luxury and modern design for comfortable working

A mouse can cause problems in the wrists, arms and shoulders, which is why choosing a good mouse is important.

With a vertical mouse you prevent physical discomfort, as the mouse is held in a handshake position. There is less lateral wrist-bending and forearm rotation.

The handshake position of vertical mice keeps the wrist from bending as much to the side while the forearm also turns inward to a lesser degree (Schmid, et al., 2015). This means that muscle activity in the forearm is less than it would be when using a conventional mouse (Quemelo & Vieira, 2013).
