

DESKRITE 350

Enjoy super-smooth electric lifting power to squeeze more activity into your working day.

Writing Standing Rectangular Shape

Use the DeskRite 350's simple button controls to move between your ideal sitting and standing heights smoothly, quickly and quietly. The strong steel powder coated frame is powered by two synchronised motors hidden within the three-column telescopic legs. You can adjust the height with the simple up and down controls on the standard switch option, or upgrade to the programmable memory switch to automatically rise or lower to your preferred heights.

Sitting for long periods of time is unhealthy and linked to a long list of diseases, including heart disease and diabetes. Breaking up long stints of sitting with standing can help activate the muscles, improve circulation and boost moods and concentration. Try standing up at your DeskRite 350 for twenty minutes of every hour.

For safety, a built-in anti-collision system senses obstructions to automatically cut the motor. Choose from a wide range of surface sizes, finishes and frames to suit your environment.

- Three-part columns with telescopic extension
- Great stability throughout the total range of extension
- Anti-collision system for safety
- Adjustable feet
- Allows users to interchange between sitting and standing positions
- Prevents static posture, a cause of aches, pains and decreased productivity
- Simple electric switch controls up and down lift (40 mm/sec) between ranges of 650-1300 mm
